

ABSTRACT

The invention provides a method of supplying a media web to a wallpaper printer. The method involves
5 opening a reusable case and placing into the case a core onto which has been located a supply roll of blank
wallpaper media. The core is supported for rotation within the case before it is closed. A free edge of the roll
is placed between a pair of rollers and past an edge of the open case, then with the rollers located within the
case and on either side of the web the case is closed and loaded into a printer. In some embodiments, a pair of
resilient bias devices hold the rollers in proximity.
